

DIKOMARINE FRESH WATER SYSTEMS FOR MARINE APPLICATIONS

Dikomarine Fresh Water Systems are specially designed for the offshore and marine market.

Each unit consists of all necessary equipments for fresh and hot water supply, such as calorifiers, hydrophores, pumps for pressurizing and hot water circulation, UV-sterilizer, silver ion sterilizer or chlorination and control cabinet.

Each unit is being designed according to customer specifications, combined with our knowledge and experience.

Complete information regarding to dimensions, connections and locations are being given to each customer before production starts.

All equipments are mounted on a common frame with all internal piping and complete electrical wiring.

Each unit, before leaving the workshop, will pass a quality-test of all functions, and especially each unit passes pressure- test.

The only thing left for the customer to do before using the equipment is to connect water inlet and outlets, electrical power supply, quick and easy installation onboard.

All equipment enjoys the highest quality. Calorifiers and hydrophores are made of Stainless Steel 316L. Pumps, sterilizers, filters, calorifiers and hydrophores are selected from well-known brands of the worldwide market. Thus spare parts are easily available worldwide.

MAIN FEATURES

- EASY TO INSTALL
- COMPACT AND FLEXIBLE DESIGN
- ADVANTAGE OF SUPPLYING ALL EQUIPMENTS AS A COMPACT SYSTEM FROM ONE SUPPLIER
